

SYNTHETIC DEMONSTRATION DATA — Official Mine Record

1. Document Metadata

Mine: Demo Central Mine	Topic: Ventilation & Safety Monitoring
Subsidiary: Demo Coal Subsidiary	Reference ID: SANKALAN-DEMO-002
Reporting Year: 2025	Status: Verified Statutory Data

2. Monitoring Summary

This demonstration dataset contains four monthly ventilation observations. Key variables include average airflow, maximum methane concentration and follow-up observations.

3. Ventilation Observations Data Table

Month	Avg. Airflow (m³/s)	Max Methane (%)	Follow-up Observations
April	18.4	0.42%	5
May	19.1	0.38%	4
June	18.7	0.45% (Peak)	6
July	19.5	0.36%	3

4. Demonstration Findings & Audit Observations

- Airflow increased from 18.4 m³/s in April to 19.5 m³/s in July.
- June recorded the highest maximum methane value at 0.45%.
- Follow-up observations decreased from 6 in June to 3 in July.
- These observations are synthetic and require expert validation before operational deployment.
