

GEOLOGICAL EXPLORATION & BOREHOLE CORE ASSESSMENT

Organization: CMPDI (Central Mine Planning & Design Institute) Date: 2025-02-25

Target Mine: Jharia Coalfield Block B

Status: Official Statutory Filing

1. EXECUTIVE SUMMARY & STATUTORY OVERVIEW

Detailed lithological core logging, seam correlation, 3D seismic block modeling, and ash grade estimations for Jharia deep coal seam horizons drilled down to 450 meters depth.

2. KEY AUDIT FINDINGS & TELEMETRY OBSERVATIONS

- 18 deep exploratory boreholes drilled down to 450m depth with average core recovery rate of 96.8%.
- Coal Seam VI intercepted at depth 384.2m with clean thick coal horizon of 14.2 meters.
- Proximate ash content evaluated at 24.5% (Grade G-11 thermal coal classification).
- Proven reserves increased by 1.4 Billion Tonnes based on 3D lithological block reconciliation.
